Reshu Agarwal
[illegible]

## TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, TypeScript, Python
- **Frameworks:** Spring Boot, ExpressJS, Angular, NodeJS
- **Cloud and Databases:** AWS, MySQL, MongoDB, DB2
- **DevOps and Automation:** Maven, Ansible, Docker, Linux Shell Scripting, CI/CD
- **Architecture and Integration:** Microservices, RESTful APIs, RabbitMQ, Apache Kafka
- **Other Technologies:** Jasper Reports, IBM WebSphere, JUnit, Git

## EXPERIENCE

**Software Developer || AIB (Allied Irish Bank), Ireland** Sep 2024 – Present

- Increased system reliability by 30% and reduced downtime incidents by integrating 50% more servers through a cross-platform automation solution.
- Contributed to a Java microservices platform handling 3000+ mortgages applications monthly.
- Resolved a critical database connection issue in production, showcasing swift troubleshooting skills.
- Reduced DNS-related outages by 15% by leading a cross-functional engineering initiative to resolve DNS registry inconsistencies.
- Reduced document generation and retrieval latency by 40% using in-memory databases and S3.

**Software Developer Intern || Mullan Lighting, Ireland** May 2024 – Aug 2024

- Increased processing efficiency by 30% and reduced manual workload by automating the dispatch order process using PHP.
- Reduced shipping expenses by 20% and optimised logistics operations by developing a price comparison algorithm.
- Decreased customer support inquiries by 25% by building an automated notification system for order updates via email.

**Developer || Fastenal, India** Jan 2022 – Jun 2023

- Increased user engagement by 20% by deploying new interactive features using Node.js and JavaScript frameworks.
- Enhanced security and user experience by integrating OneLogin SSO with OAuth 2.0.
- Achieved a 5-6% improvement in overall code reliability and maintainability.
- Boosted scalability and reduced system latency by 30% by migrating synchronous workflows to an event-driven architecture with Kafka.
- Implemented performance tuning strategies for MongoDB, enhancing system scalability and reliability.

## ACHIEVEMENTS

- Developed an automation bot that managed operations for up to 20+ e-commerce shops, saving clients an estimated of 15+ hours per week.
- Built and presented a deep learning-based emotion recognition and sentiment analysis system (Python, NLTK) as a Summer Research Intern at Illinois Institute of Technology; results published at IEEE Xplore.

## EDUCATION

**University College of Dublin || MSc Computer Science Negotiated Learning** Sep 2023 – Aug 2024
**Core Modules:** Software Engineering, Advanced Java & Data Structures, Cloud Computing, SQL, Distributed Computing

**Birla Institute of Technology, Mesra, India || B.Tech. in Computer Science** Jun 2018 – May 2022
**Core Modules:** OS, DBMS, Data Mining, Data Structures & Algorithm, Linux & Shell Programming, Java, Computer Organisation & Architecture.
