## PROFESSIONAL SUMMARY

Full-stack SDE intern experienced in building production-grade document-processing pipelines on AWS and applying advanced optimization models to solve NP-hard resource allocation problems. Contributed to a $1M+ Performance Management System by delivering a key proof-of-concept using React/Next.js and Python/Flask. Reduced asset-tracking costs by 37% by developing a device-management portal for 10,000 employees.

## AREAS OF EXPERTISE

**Languages:** Python, Java, JavaScript/TypeScript, SQL, HTML/CSS
**Frameworks:** Spring Boot, React, Next.js, FastAPI, Pytest, JUnit, Pandas
**Cloud and DevOps:** AWS, Azure, Docker, CI/CD, Git;
**Data and Databases:** PostgreSQL, MongoDB, OpenSearch;
**Core Concepts:** System Design, Distributed Systems, Microservices, Algorithms, Data Structures
**Familiar With:** Node.js, React Native, Golang, Redis, DynamoDB, Clickhouse, Agentic Systems

## WORK EXPERIENCE

**Software Development Engineer Intern**, *Tally Solutions, Bengaluru, KA* — Jan 2024 – May 2024

- Aided in enabling a $1M+ investment for an enterprise-wide Performance Management System by developing and delivering a key proof-of-concept in ReactJS, and Fluent UI.
- Minimized asset-tracking costs by 37% by building a full-stack Next.js portal that integrated with Azure AD, Graph API, and internal inventory systems for 10,000+ employees.
- Shrank manual deployment effort by 25% by enhancing the team's CI/CD pipeline with automated build triggers and deployment scripts, improving release stability for critical internal services.

**Software Development Engineer Intern**, *Vivriti Capital, Chennai, TN* — Jul 2023 – Aug 2023

- Contributed towards decreasing credit report processing time by 99%+ (from 3 months to 4 minutes) by building an automated document-processing pipeline using AWS Lambda, ECS, and Spring Boot microservices.
- Cut analyst data lookup time by 80% by engineering an indexing solution in Amazon OpenSearch, featuring faceted search and on-demand CSV export capabilities for multi-gigabyte datasets.
- Verified data against a rule set of 40+ business logic checks programmatically, by architecting a validation pipeline, eliminating previously common data corruption errors.

## PROJECTS

**Cervical Cancer Detection** — Demonstration Notebook

- Increased F1 score by 12% and drove false negatives below 2% by designing a novel CNN-UMAP-SVM pipeline for medical image classification on public health datasets.
- Tools Used: Python, TensorFlow/Keras, scikit-learn, UMAP, OpenCV, Pandas, NumPy, Jupyter, Kaggle

**MatchWise** — Repositories

- Achieved a 90% reduction in manual allocation time by designing and backtesting an Integer Linear Programming (ILP) optimization model to solve the NP-hard Resource-to-Task assignment problem.
- Delivered sub-200ms API response times by engineering the model's backend service using Python (FastAPI), enabling real-time interaction with the ILP solver from the Flutter frontend.
- Tools Used: Python (FastAPI), PuLP, OR-Tools, Flutter/Dart, Firebase (Auth/Storage/Hosting), GitHub Actions (CI/CD)

## EDUCATION

**University of North Carolina at Chapel Hill**, MS in Computer Science — Aug 2024 – May 2026

- **GPA:** 4.0 (HP/P/F scale)

**Amrita Vishwa Vidyapeetham**, B.Tech in Computer Science Engineering — Oct 2020 – May 2024

- **CGPA:** 8.84/10 (First Class with Distinction - highest academic honor in Indian system)
