PROFESSIONAL SUMMARY

Results-driven Data Scientist with 5 years of experience blending machine learning, software engineering, and data science to deliver production-ready AI/ML solutions. Proficient in Python, TensorFlow, SQL, and pandas, with a proven track record of cross-functional collaboration to drive automation and financial insights; awarded 2nd Prize at the NUIG Data Science Datathon and selected to visit IBM and Microsoft for learning on quantum computing and AI technologies.

TECHNOLOGIES

- Python, MySQL
- scikit-learn, Git
- Gradient Boosting, Financial Modeling
- GCP, Scalable Pipelines
- PostgreSQL, pandas
- NLP, LLMs
- MLOps, Model Deployment
- CI/CD Integration, Automation
- PyTorch, TensorFlow
- Regression, Random Forest
- AWS, Azure
- Tableau, Power BI

WORK EXPERIENCE

Analyst, *Merck KGaA Bengaluru– India* Oct 2020 – Aug 2023

- Optimized financial fraud detection, reducing false negatives by 35% and improving scalability by 40% across global systems by developing machine learning pipelines using scikit-learn and TensorFlow.
- Improved data quality and response accuracy by 25% by automating financial EDA workflows over 500K+ records/month using pandas and SQL.
- Reduced fraud response time by 60% by building interactive Python dashboards integrated seamlessly with IT systems.
- Increased model performance by 30% and reliability in live financial environments by creating reusable data preprocessing pipelines with >95% consistency.
- Prevented an estimated $1M in annual losses by deploying ML-driven fraud controls in collaboration with compliance, operations, and analytics teams.

Associate Analyst, *Associate Analyst - India* Sept 2018 – May 2020

- Increased fraud pattern detection by 40% in pilot simulations by designing anomaly detection models for aviation financial logs using unsupervised learning techniques.
- Enhanced TBM-aligned delivery efficiency by reducing data preparation time by 50% through building and validating structured ML datasets.
- Improved processing speed by 80% and logic accuracy by 35% by automating SQL workflows for fraud signal extraction.
- Decreased manual testing by 20% by integrating ML logic into simulation environments in collaboration with product and QA teams.
- Achieved >99.5% system uptime by optimizing data pipelines and implementing MLOps reliability improvements.

PROJECTS

Generative AI-Powered Cost Optimization Assistant for FinOps Platforms 2024

- Built and deployed a generative AI-based assistant that interprets cloud usage logs, financial data, and IT telemetry to surface optimization opportunities and predict overspending risks.
- The system improved budget forecasting accuracy by 32%, reduced unused cloud resource costs by 28%, and supported strategic FinOps decisions through natural language query insights.

EDUCATION

University of Galway, M.Sc in Business Analytics (2:1) Sept 2023 – May 2024

- **Coursework:** Business Modeling, Decision theory and AI, DBMS, Advanced Python

Visweswaraya Technological University, Bachelors in Computer Science August 2014 – May 2018

- **Coursework:** Computer Architecture, Data Structures, Algorithms, Software Engineering, Machine Learning
